

DEPOSIT PROCEDURES:

To enable all our clients have the opportunity to participate in the opportunities we offer, we have made it easy for them to deposit funds into their trading or investment accounts. The following ways is how they are to deposit their funds:

IT should be noted that all deposits must be done directly to the company's account using any of the following methods, no cash will be accepted from any client or by any staff, all cash deposits must be done direct to our company account as will be provided.

1) Crypto Currencies:

Using this method, the client can deposit BTC, ETH, USDT or any of the 10 major crypto currencies directly into their trading account. In this case, if a client deposits \$1000 worth of BTC into our company BTC address provided at the time of deposit, he or she will have \$1000 in his/her trading or investment account. There are no fees involved and no charges involved. In this case we assume the client will buy his crypto currency or holds some in his/her possession.

NOTE: It should be noted that, if between the deposit using cryptocurrencies, fluctuations work in favour of or against the client, this will also be reflected in the clients' accounts and therefore a \$1000 deposit may become \$1010 or \$990 as received.

2) Mobile Money Transfer:

A client can deposit using mobile money. In this case the client will have to take into account the current rate of local BTC purchase price.

For example, if the rate of BTC to USD in Cameroon is 630frs, then to deposit an equivalent of \$1000 into their trading or investment account, the client will have to multiply 1000 by 630frs ($1000 \times 630 = 630,000$ frs). So, the client in the case above will need to transfer 630,000frs by mobile money to the company's mobile money account along with the charges for withdrawal. So, if the charges to withdraw are 2000frs, then in total the client or customer will have to send 632,000frs via mobile Money. To save cost on this, the client can simply deposit cash into our bank account using the rates of BTC as above.

3) Bank Deposit or Transfer:

This is another method by which the client can deposit or credit their trading or investment account. In this case the client takes the cash to any local branch and deposits it directly into the company's bank account. Or the client can simply give instructions to their local bank to do the payment on their behalf.

With this method, the client needs to take into account the local BTC to XAF rate before making any cash deposits into the company account. This means that if the local exchange rate of BTC to CFA(XAF) is 630frs to 1USD, and the client wishes to deposit a cash equivalent of \$1000 into the company bank account, then the client will have to multiply 630 by 1000 ($630 \times 1000 = 630,000$ frs) and

make a cash deposit of 630,000frs. In this manner the client's trading or investment account will be credited with \$1000.

NOTE: It should be noted that, this rule will also apply to the registration or set up fee of \$100.

IMPORTANT:

After every deposit, or transfer, the client must retain a copy of the receipt and present it to the company cashier or accountant, only then will the deposit be matched to the corresponding name on the receipt. If a payment is made by mobile money, make sure to use your name as a reference or send the funds directly using your mobile money account.
